

Mursalimov Erik QA Engineer (Auto / Manual / API / Integration Testing)

+7 902 626 95 36 | erik.mursalimov@mail.ru | [@favoran](https://t.me/favoran) | Saint Petersburg, Russia

Test types: unit, smoke, regression, integration, E2E, API, UI

Tools: Jira, Zephyr, TestRail, Confluence, Postman, Swagger, Charles, Git, Kibana, Figma

Databases PostgreSQL, MySQL, SQLite

Technologies: HTTP/REST, JSON/XML, DevTools, HTML/CSS

Languages & frameworks: Java (JUnit5, Mockito), Python (Pytest, Selenium), Jacoco

Methodologies: Agile (Scrum), TDD

WORK EXPERIENCE

Fastact: 09/2024 - **present** (1 year 8 months)

Stack: Postman, Swagger, junit 5, mockito, spring boot starter test, io.zonky.test embedded, de.flapdoodle.embed.mongo, reactor-test, PostgreSQL, Kafka, Docker, Git

- **Sole QA engineer on the project**, built testing from scratch for a microservice architecture (5 Java services + Python AI component)
- Wrote unit & integration tests for Java (JUnit5, Mockito, Testcontainers) & PyTest for AI component, coverage >80%
- Set up CI in GitLab with auto-run on every push — regression defects reduced by 30-50%
- Covered E2E scenarios for the full product cycle, including inter-module integrations
- Tested the payment service including payment provider integration and failure scenarios; verified inter-service fault tolerance

Gazprom: 08/2022 – **present** (3 years 10 months)

Stack: Jira, Confluence, Postman, Swagger, SQL, PostgreSQL, REST/JSON, Kibana, GitLab, Docker

- Tested the ERP production accounting system: covered key modules with test cases, identified critical defects pre-release
- Tested dispatching and production monitoring systems, verified real-time data accuracy, identified 30+ critical bugs
- Tested the document management system: workflows, approvals, report generation — achieved 100% test case coverage for integrations
- Migrated test cases for cross-subsidiary integrations, reducing reporting time
- Documented 600+ test cases covering corporate and integration scenarios
- Reduced root cause analysis time through systematic log analysis in Kibana and structured bug reporting
- Participated in sprints, retrospectives, and requirements analysis alongside developers and analysts

SMENA: 02/2022 – 07/2022 (6 months)

Stack: TestRail, Jira, Postman, Swagger, DevTools, Figma, JSON/XML, Confluence

- Performed functional, regression, smoke and sanity testing of web products
- Developed and maintained test documentation, achieving up to 95% functional coverage
- Tested API and integrations using traffic sniffers and HTTP request analysis
- Introduced tag classification and test suite structure, increasing coverage of critical modules by 40%
- Initiated onboarding guides for new team members, cutting ramp-up time by 2 weeks
- Identified and documented 100+ bugs including critical ones, helped eliminate documentation technical debt
- Accompanied features from ideation to production, including release and client acceptance
- Reduced average project delivery time by 25%

EDUCATION

Vocational diploma: GTNU — Oil and Gas Engineer (2018-2022)

Bachelor's degree: TUSUR — Department of Computer Engineering (2023-2028)
